

## KUNKLE BAILEY 716H SAFETY RELIEF VALVE

A high pressure safety relief valve that combines a top guided, unobstructed seat bore with full lift capability to provide maximum discharge

### FEATURES

- Positive reseating achieved via freely pivoting EPDM discs for gas and liquid duties up to 150°C.
- Optional Aflas soft seats increase the range to 200°C.
- Precision lapped stainless steel trim gives positive re-seating for steam duty at higher temperatures.
- Choice of threaded or flanged connections.
- Optional open or packed test lever for inline safety checking.
- Alternative sealed dome for service conditions requiring a pressure tight seal on the discharge side (eg. liquid service).

### GENERAL APPLICATION

The 716H is certified to ASME VIII and is suitable for the protection of vessels, pipelines and equipment using cold water; air; process or corrosive liquids; cold and fine gases and for clean steam and gases in hygienic environments.

#### Air capacity - other gases

If you wish to use the valve on other compatible gases, the sizing details above can be used. However, the valve capacity will change depending on the specific gravity of the flowing gas. Multiply the valve air capacity by  $1/\sqrt{SG}$  to give the gas capacity. SG = specific gravity (relative to air = 1).

#### Useful conversions

$Nm^3/h = l/sec \times 3.60$

$SCFM = l/sec \times 2.12$

#### Saturated steam capacity - other temperatures

This steam table is based on saturated steam, at the temperatures shown.

For steam systems operating at higher temperatures, the above capacities will need to be derated by using the super heat correction factor.

#### Useful conversions

$lbs/h = kg/h \times 2.2046$

### Other liquids

If you wish to use the valve on other compatible liquids, the sizing details above can be used. The valve capacity will however change depending on the specific gravity of the flowing liquid. Multiply the valve water capacity by  $1/\sqrt{SG}$  to give the liquid capacity. SG = specific gravity (relative to water = 1).

### Useful conversions

lgpm = l/min x 0.22

m<sup>3</sup>/min = l/min x 0.001
